Master Planning & Design Experience

Throughout my career, I have led complex planning challenges that required continuously expanding my technical and strategic expertise. Working across large-scale master-planned developments, I have developed governance frameworks, managed land-use controls, and delivered solutions that balance regulatory compliance with project performance. The following examples highlight key areas of learning and impact.

Addressing Manual

Developed the Addressing Manual for Ras Al Khaimah, establishing standardized guidelines for street naming and plot numbering that formed the foundation of the emirate-wide Addressing System launched in 2021. The manual was structured to support long-term urban growth, incorporating adaptable provisions for future master plan updates, phased development, and city expansion.

Awafi Sustainable District

Developed visualization and presentation materials for the Awafi Sustainable District, including master plan illustrations, rendered visuals, and communication graphics supporting stakeholder engagement and project marketing initiatives. The project was officially launched in November 2023.

Awafi Sustainable District

2014 Concept Master Plan Report

2020 Revised Master Plan

2021 Launch Marketing Material

Developed the concept master plan for Awafi, a 400 ha residential community, and later supervised subsequent plan revisions and refinements to support evolving project requirements. Produced high-quality 3D models, rendered perspectives, and animated visualizations to support stakeholder presentations, project communication, and development marketing initiatives.

Vision Master Plan Presentation

Developed presentation and animated video materials for the Vision 2030 project, supporting strategic presentations to Ras Al Khaimah Municipality and key stakeholder groups. Translated complex planning concepts, development strategies, and long-term vision objectives into clear and engaging visual communication materials for stakeholder engagement and decision-making.

Guidelines

Contributed to the development of Ras Al Khaimah's first Neighborhood Design Guidelines Vol. 1: Emirati Residential Neighborhood, and Public Realm Design Guidelines, helping shape foundational standards for community planning and public realm quality. Scope included research and international benchmarking, preparation of the initial framework, graphic production, and report design and layout using Adobe InDesign.

+971 56 433 6391

Confidential Project

Developed a concept structure plan for an 18,000 ha greenfield site based on a polycentric development model, integrating residential-commercial centers, hospitality and recreation districts, and a business park to support long-term urban growth and connectivity.

Julfar Heritage Corridor

Part of a multi-agency working group comprising private developers, the Department of Antiquities, RAK Tourism Development Authority, and Ras Al Khaimah Municipality to develop the Julfar Heritage Corridor, aimed at enhancing cultural tourism in Ras Al Khaimah. Contributed to the revitalization of Old Ras Al Khaimah as a tourism destination through the proposal of a heritage loop linking key historic sites and attractions, supported by public realm improvement strategies; and prepared design concepts for archaeological heritage sites.

+971 56 433 6391

Confidential Project 01

Prepared the concept design for a waterfront residential neighborhood through the transformation of former agricultural plots into a planned residential community. Coordinated closely with the hydrology team to integrate flood mitigation strategies, including channeling and management of floodwater flows to protect the development site.

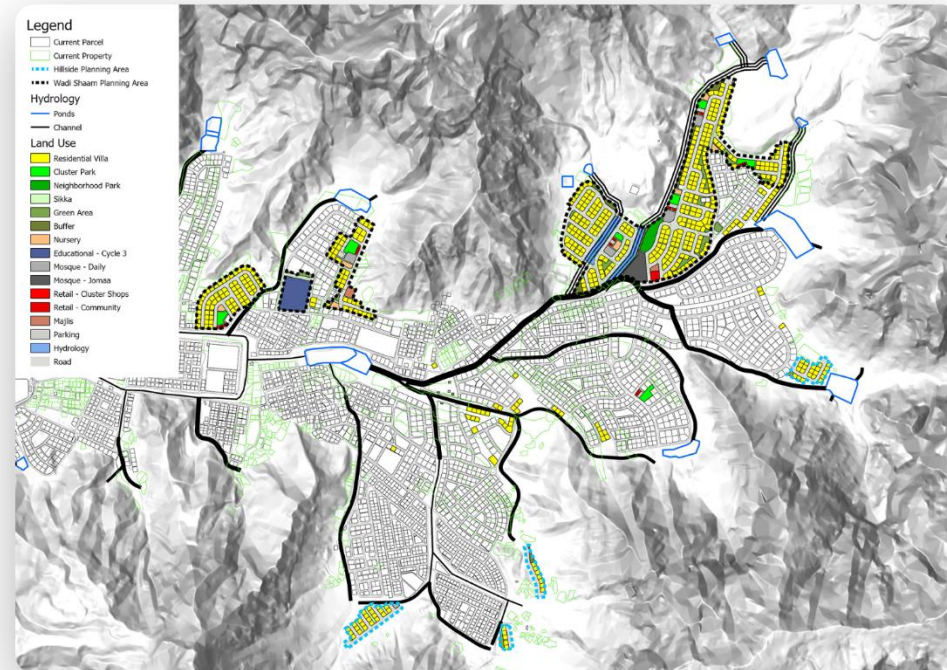

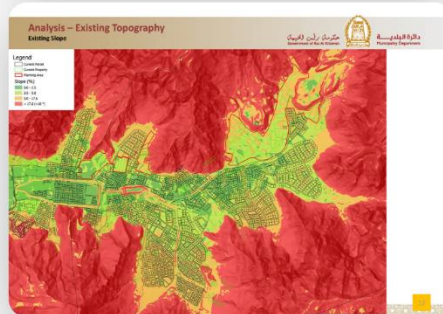

Herbert Flor

Master Planning & Urban Design

herbert.flor@yahoo.com

+971 56 433 6391

Confidential Project 02

Developed the concept master plan for the conversion of underutilized agricultural land into residential communities, coordinating closely with hydrology engineers to integrate proposed drainage channels and flood management requirements into the planning framework. Applied GIS-based spatial and topographic analysis to identify suitable development areas within sloping terrain, supporting site-responsive planning, infrastructure coordination, and efficient land utilization.

Master Planning & Urban Design

herbert.flor@yahoo.com

+971 56 433 6391

Confidential Project 03

Prepared the concept master plan for an infill residential development utilizing newly available land created between a proposed hydrology channel and an existing neighborhood. The planning approach focused on integrating the new community with surrounding development while responding to site constraints, infrastructure coordination, and flood management requirements.

Herbert Flor

Master Planning & Urban Design

herbert.flor@yahoo.com

+971 56 433 6391

Confidential Project 04

Produced master plan for a residential community adjacent to protected mangrove areas, integrating proposed drainage channels as landscape and open space features within the overall community structure. The plan incorporated a continuous sikka network to enhance pedestrian connectivity across the site while preserving key view corridors toward the mangrove landscape, supporting environmentally responsive and community-oriented urban design.

+971 56 433 6391

RAK Academic City

Prepared the concept master plan for a proposed Academic City, coordinating closely with RAKEZ as the property owner through multiple presentation and review stages to refine the overall development vision. The master plan organized academic facilities, student and staff residential clusters, and mixed-use activity nodes within walkable distances, promoting a connected and pedestrian-oriented campus environment. A green pedestrian network linked key destinations across the site, with landscaped activity nodes positioned at major intersections to encourage social interaction and enhance the public realm.

Public Realm Studies 01

Pedestrian-Priority Street

Often referred to as *'shared street'* a **pedestrian-priority street** is a street that allows all users – pedestrians, bicyclists, and vehicles – to move within the same space. Vehicles are permitted to access shared spaces at slow speed, and no longer dominate the environment.

The concept of the **woonerf** was developed in the late 1960s in the city of Delft, Netherlands.

Pocket Park

Plaza

One-way woonerf-style **pedestrian-priority street** with 4.5 m min. width. Paved up to property line. Enables access to rest of the plots

Two-way road

One-way road

Adjust affected plots

Plaza

Pocket park

Adjust affected plots

Bend on the road forces cars to slow down as the road "enters" the plaza

Plaza

Al Mairid
Concept Plan

Prepared a public realm and access study for an existing unplanned settlement, aimed at improving connectivity and ensuring vehicular access to all plots within the community. Developed a shared pedestrian street network integrated with landscaped nodes and small public plazas where space permitted, enhancing walkability, accessibility, and overall public realm quality within the constrained urban fabric.
